

Proposed Solution

Introduction

The AI Learning Assistant is a web-based application that combines emotion detection and Google's Gemini AI to provide intelligent and personalized learning support.

Solution Overview

The application allows students to:

- Enter study-related questions or thoughts.
 - Detect emotional state from text.
 - Receive personalized AI-generated study guidance.
 - Store interaction history.
 - View learning analytics.
-

Working Process

1. Student enters text.
 2. Emotion Detection Module analyzes emotion.
 3. Emotion is sent to Gemini AI.
 4. Gemini generates personalized guidance.
 5. Response is displayed.
 6. Interaction is stored.
 7. Dashboard displays analytics.
-

Modules

User Interface

Developed using Streamlit.

Emotion Detection

Identifies emotions from user input.

Gemini AI Module

Generates personalized responses.

Logger

Stores interaction history in CSV format.

Dashboard

Displays analytics using charts.

Advantages

- Personalized recommendations
 - Fast response generation
 - Simple interface
 - Secure API management
 - Scalable design
-

Conclusion

The proposed solution integrates Artificial Intelligence with emotional awareness to provide a smarter and more engaging learning experience.
