

Coding & Solution

Introduction

The AI Learning Assistant was developed using Python and Streamlit with Google's Gemini AI. The application provides personalized learning support based on emotion detection.

Development Process

Step 1

Developed the Streamlit user interface.

Step 2

Implemented emotion detection.

Step 3

Integrated Google Gemini AI.

Step 4

Generated personalized responses.

Step 5

Stored user interactions in CSV.

Step 6

Developed dashboard analytics.

Technologies Used

- Python

- Streamlit
- Google Gemini AI
- Pandas
- Matplotlib
- python-dotenv
- GitHub

Solution Workflow

User Input

Emotion Detection

Google Gemini AI

Personalized Response

Logger (CSV)

Dashboard Analytics

Coding Standards

- Modular programming
 - Error handling
 - Secure API management
 - Reusable functions
 - Clear documentation
-

Conclusion

The developed solution provides an intelligent and interactive learning experience while maintaining clean and maintainable code.
